

Joy, IL August 2023 Council Report

Water System

Things have been running just fine at the plant.

There are a few extra samples that we have to collect this quarter.

I have sent everything to the EPA about the lead/copper reporting issue. They are looking into it. We obviously sampled in the correct time period and our results were reported to us long before the reporting deadline, so it is just a matter of the EPA getting things sorted out. We did everything by the book.

Wastewater System

Nothing of note for the wastewater system.
