

## Joy, IL February 2024 Council Report

### Water System

Gwen had to send out a notice for a missed sample from 2022. This was a nitrite sample that was missed prior to us taking over. It should have been noted on the 2023 CCR and that should've counted as the public notice, but the EPA missed it when they compiled our CCR. Anyway, none of this is a big deal. It is 100% about just satisfying the letter of the law. Nitrite levels are next to nothing, so there are no concerns whatsoever about high levels of nitrite in the water. We are required to submit another nitrite sample along with our nitrate sample for this quarter. Those samples are being driven to the laboratory the last week of February.

I will be submitting a new lead/copper plan to the EPA. This is required with the new inventory. It is an easy process.

Otherwise, all is quiet at the water plant.

### Wastewater System

Nothing of note for the wastewater system.
